SUMMARY

Angular Frontend Developer with 4+ years of experience developing, maintaining and modernizing production web applications across Angular versions v14-v22.

Specialized in Angular 22, TypeScript, RxJS, Signals, Standalone Components, Server-Side Rendering, strongly typed REST API integrations and reusable component architectures.

Experienced in building scalable frontend solutions, modernizing legacy implementations, improving application performance and creating maintainable codebases supported by comprehensive unit testing.

EXPERIENCE

Angular Frontend Developer — Contractor

August 2025 – November 2025

Mindata | Landing Gastronómica — RIU

- Developed a production-ready single-page application using Angular 21, TypeScript, Standalone Components and Signals.
- Implemented a modern signal-based state management approach without introducing unnecessary external dependencies.
- Designed and developed custom Angular directives to improve user interactions, DOM behavior and code reusability.
- Created HTTP interceptors for centralized error handling, request management and global loading states.
- Integrated RESTful services using strictly typed TypeScript models and fallback mechanisms to improve application stability.
- Implemented unit tests with Jest, achieving more than 85% test coverage.
- Structured the application using domain-oriented services, helpers and shared components to improve scalability and maintainability.
- Collaborated with designers, backend developers and other team members in an Agile environment.

Angular Frontend Developer

August 2022 – Present

7 Ideas Software

- Develop and maintain production Angular applications across versions v14-v22, with a strong focus on performance, scalability and user experience.
- Modernize legacy Angular implementations using Standalone Components, Signals, modern template syntax and reusable architectural patterns.
- Build modular and responsive user interfaces using Angular Material, Tailwind CSS, HTML5 and CSS3.
- Create reusable components, directives and shared UI patterns to reduce duplicated logic and improve visual consistency.
- Integrate RESTful APIs using Angular HttpClient, RxJS and strict TypeScript typing.
- Implement HTTP interceptors, centralized error handling, loading states and predictable asynchronous data flows.
- Develop complex Reactive Forms with custom validations, dynamic controls and strongly typed form structures.
- Apply Server-Side Rendering, lazy loading, route-level code splitting and change detection optimizations.
- Participate in code reviews and identify opportunities to improve frontend architecture, performance and maintainability.
- Collaborate closely with Java backend teams and provide support for application deployments on Tomcat servers.
- Work with Docker, Docker Compose and Ubuntu Linux environments for local development, deployment and troubleshooting.

- Collaborate with cross-functional teams using Scrum and Kanban methodologies.

PROJECTS

Personal Portfolio | Angular 22, TypeScript and Tailwind CSS

- Designed and developed a responsive personal portfolio using Angular 22 and Tailwind CSS.
- Implemented Server-Side Rendering and modern Angular architecture to improve performance and maintainability.
- Built the application using Standalone Components, Signals and reusable UI components.
- Created responsive layouts focused on accessibility, user experience and project presentation.
- Structured the project to demonstrate practical experience with Angular, TypeScript, component architecture and modern frontend development.

TECHNICAL SKILLS

Frontend: Angular 22, professional experience across Angular v14-v22, TypeScript, JavaScript, RxJS, HTML5, CSS3

Modern Angular: Standalone Components, Signals, computed and effect, Signal Inputs and Outputs, Reactive Forms, Modern Template Control Flow, Lazy Loading, route-level code splitting

Rendering and Performance: Server-Side Rendering, hydration, prerendering, OnPush change detection, application performance optimization

UI and Styling: Tailwind CSS, Angular Material, Responsive Design, Reusable Components, Component-Driven Development, Semantic HTML, Accessibility Best Practices

State and API Integration: RESTful APIs, Angular HttpClient, HTTP Interceptors, Strict TypeScript Typing, Centralized Error Handling, Loading States, Fallback Strategies

Testing and Quality: Jest, Angular TestBed, Unit Testing, 85%+ Test Coverage, Clean Code, Code Reviews, Maintainable Architecture

Tools and DevOps: Git, GitHub, GitLab, Docker, Docker Compose, Ubuntu Linux, Tomcat Deployments

Methodologies: Agile Development, Scrum, Kanban, Cross-Functional Collaboration

LANGUAGES

Spanish: Native English: Intermediate — technical documentation, technical reading and written communication
